

PERCo Case study

City stadium Karviná-Ráj is one of the most beautiful football stadiums in Czech Republic. It is the home stadium of MFK Karviná.

50

years of operation

4 800

spectators

7 000

square meters

In 2016 the stadium was completely renovated in accordance with the up-to-date technical requirements. The design project was developed by the COPLAN Projekt bureau. Security concerns were of the utmost importance during the reconstruction of the stadium.

22 TTD-08A box tripod turnstiles were installed to ensure access control for visitors. Passage area has been additionally equipped with BH02 railing sections to distinguish the flow of spectators.

Equipped with automatic anti-panic function, vandal resistant TTD-08A turnstile for outdoor use is the optimal solution for stadiums, it allows organizing evacuation of people in the shortest time possible.

The turnstiles can be easily equipped with barcode readers due to stainless steel flat top covers. RTD-15.1R full height rotor turnstile has been installed at a service entrance for the organization of access control for employees.

Full height turnstiles are designed for facilities with high requirements for maximum security and safety.
