Emaar Properties is the biggest developer in the Middle East with impressive projects of the world's tallest building, Burj Khalifa and Dubai Mall. Marassi project is implemented by Emaar Misr – a division of Emaar properties and one of the main foreign investors in the real estate sector of Egypt.

"We are sharpening our strategy to be one of the world's most valuable, most innovative and most admired companies"

– Mohamed Alabbar, Chairman of Emaar Properties PJSC

Marassi Beach Resort consists of seven neighborhoods inspired by six different Mediterranean lifestyles including Egypt, Morocco, Tunisia, Greece, Spain and Italy.

Marassi Beach Resort received prestigious Leisure & Tourism Project Award at Cityscape event for:

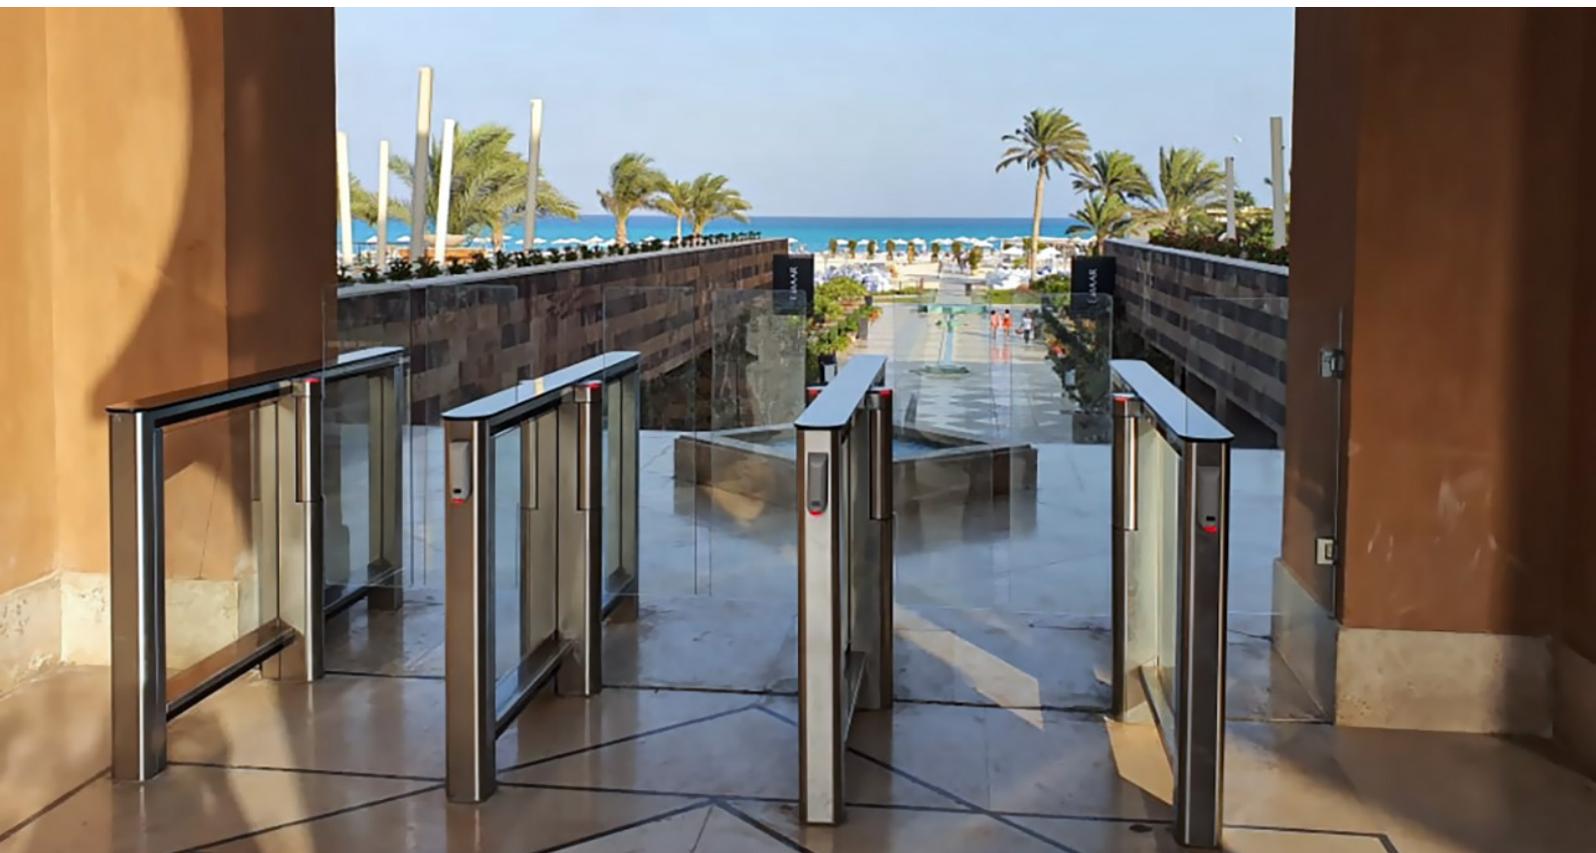

2013 – Real Estate

2014 – Best Built and Future

A special attention was paid to security and access control to the territory of the resort.

Seven ST-01 speed gates with swing panels of increased height were chosen for this project along with forty TTD-08A box tripod turnstiles.

ST-01 speed gates with swing panels are designed for sites with high aesthetic and comfort requirements. When receiving a signal from an ACS, the glass panels open providing a comfortable contactless passage. In case of emergency situation, the swing gates open automatically ensuring fast evacuation of people.

TTD-08A box tripods for outdoor use feature enhanced durability and automatic anti-panic function for fast evacuation of people in case of emergency.

Smartphones are used as identifiers. Access control is handled by an application created and developed by Emaar. Visitors use QR codes shared by Marassi residents to access the area of the resort by presenting the code on the smartphone screen to the turnstile reader.
