Tripod turnstiles

for arrangement of checkpoints

All-weather
design

Automatic
anti-panic function

Compact
size

PERCo tripod turnstiles are the most popular type of turnstiles thanks to their attractive price, dimensions and reliability. The compact size allows installation of tripod turnstiles within minimum space.

When installed in a row, box tripod turnstiles form a passage zone so that there is no need to apply extra railing systems. Their stainless steel design ensures corrosion resistance and high durability when used outdoors.

Automatic anti-panic barrier arms help to clear the passageway without delay in case of an emergency. Upon a signal from an ACS or in case of power loss, the barrier arm automatically drops down, providing an unobstructed exit.

Box tripod turnstiles are easy to integrate with additional equipment, such as readers, card capture readers, barcode scanners, face recognition terminals, etc. To simplify the installation process, special brackets and posts have been developed. Built-in readers can be placed under the covers of tripod turnstiles. Identifier presentation zones are indicated with pictograms.
