

TTR-10A Transport turnstile

Automatic fare collection solution

TTR-10A Turnstile is used in transport as a blocking device and part of an automated fare collection system.

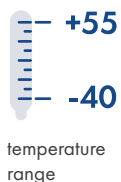

The turnstile is designed for installation on handrails in public transport

Delivery set includes:

- turnstile with built-in electronics
- barrier arms with automatic "anti-panic" function
- bracket for handrail mounting
- remote control panel

Stainless steel turnstile with LED indication

Main features:

- smooth barrier arms rotation due to built-in electric drive
- compact design
- outdoor application
- vibration resistance rating: M28 and M39
- immediate unblocking in case of an emergency or power loss
