Access control system PERCo-Web

PERCo-Web is a reliable tool for business security.

- ✓ Improvement of the level of security at the site
- ✓ Protection against an unauthorized entry on site
- ✓ Protection against theft
- ✓ Protection against vandalism
- ✓ Events control

Entrance to any site is a key security point. The system allows to prevent access of unauthorized persons, and to regulate the access of employees and visitors by time. All entrances and exits are accepted only by presenting an access card.

For office-buildings with high security requirements PERCo offers a wide range of turnstiles from cost-efficient compact tripods to up-market speed gates.

All turnstile models provide both passage control one by one and operation safety.

Tripod Turnstiles

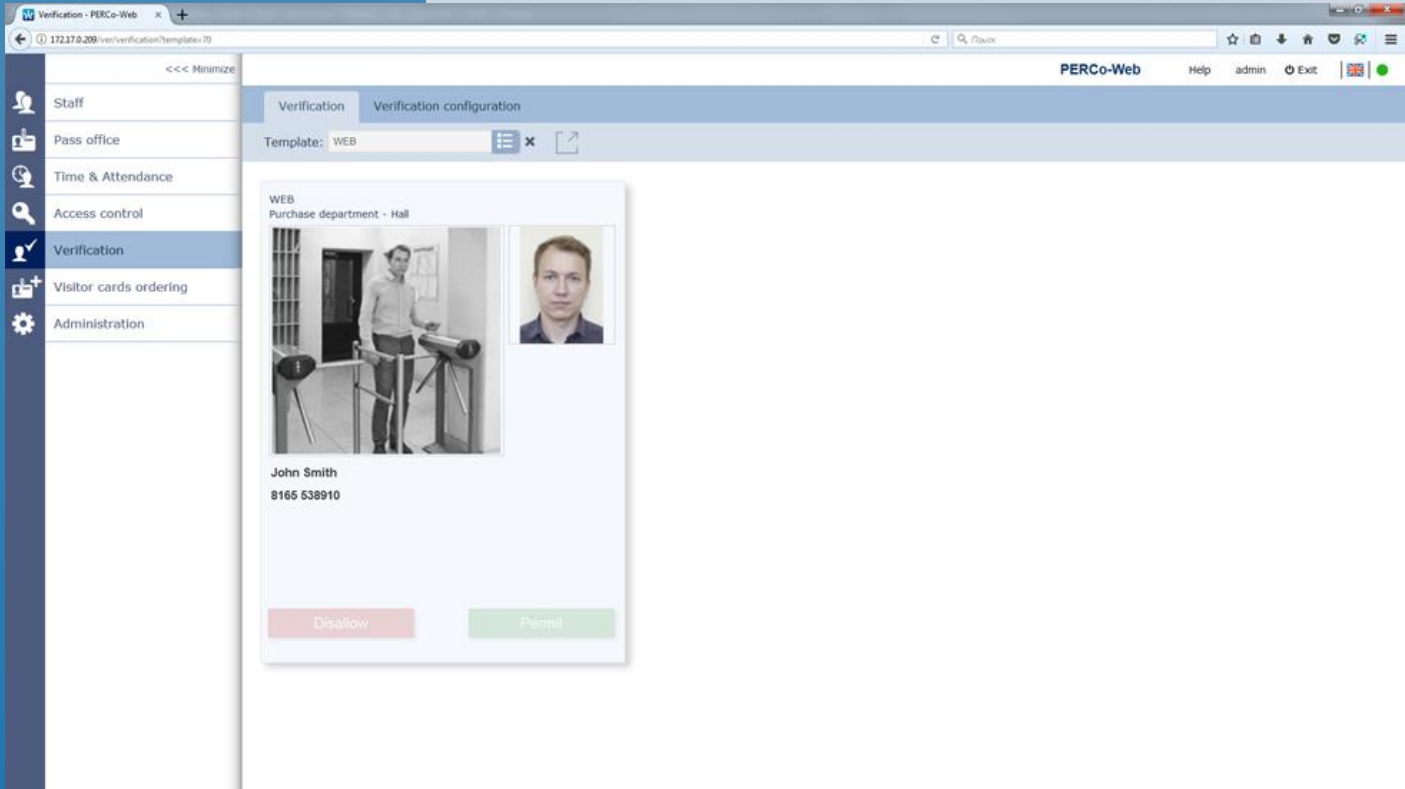

Box Tripod Turnstiles

Speed Gates

For additional passage control, like prevention of entrance by someone else's card, there is a verification opportunity. Operator compares the face of the person with the database image and doesn't allow the entry if they don't match.

Visitors receive temporary access cards. They enter the office building through the turnstile with an access card in the same way as the employees. However, at the exit visitors insert access cards into the card capture reader. If the card is not inserted, the turnstile will not open for an exit.

PERCo produces both stand-alone and in-built into the turnstile card capture readers.

The visitor's card can be issued at the moment of arrival or in advance. PERCo-Web system has an option of pass pre-order.

The screenshot displays the PERCo-Web system interface. A sidebar on the left contains navigation options: Staff, Pass office, Time & Attendance, Access control, Verification, Visitor cards ordering (highlighted), and Administration. The main content area shows the 'Visitor cards ordering' section with a search bar and a list of visitors. A 'Visitor credentials' modal form is open for a visitor named David White. The form includes fields for Last name (White), Name (David), Middle name, Supporting document (ID), Document number, and Phone. It also features dropdown menus for 'Where (department): Sales' and 'Accompanying: Jones Edward', and a date picker for 'Valid until: 24-10-2017 23:45'. An 'Images:' section contains a 'Photo' dropdown and a photo of a man in a suit. A 'Save' button is located at the bottom right of the modal. In the background, a table lists visitor orders with columns for Order date, Valid until, and Photo.

Order date	Valid until	Photo
04-10-2016 16:43:13	24-10-2017 23:45:00	

The system enables access to employees and visitors only to the allowed premises and at the agreed time. Access cards can be issued in the form of passes or badges.

It is possible to activate security mode with a card, so that other employees can not enter the premises in the absence of its owner.

PERCo offers locks for standard and profile doors, designed specially for operation within access control systems. Their unique feature is the power supply through the contact group in the bolt.

It preserves the exterior appearance of the door and simplifies the installation process, since the installation of adapters and door position sensors is not required.

In case of emergencies, the system allows to determine who was the last to leave the room, who activated security mode, etc. All information about events is stored in the system memory.
